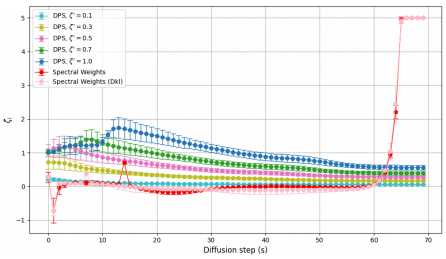
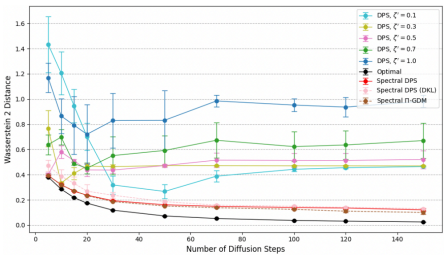
ICML Rebuttal

Submission Number: 17742



(a) Spectral recommendations derived from KL divergence and Wasserstein-2 optimization, compared to the DPS heuristic, for different numbers of diffusion steps.



(b) Wasserstein-2 distance as a function of the number of diffusion steps, for the KL-derived recommendations, the Wasserstein-2 recommendations, and the DPS heuristic.

Figure 1: Comparison of spectral recommendations derived from KL divergence and Wasserstein-2 optimization. (a) Recommended weights alongside the DPS heuristic. (b) Resulting Wasserstein-2 distances across diffusion steps.
